

DOOR MOT SERVICE

Breathe new life back into your doors!

Do your external doors need an MOT? We all ensure our cars are good to go. We even join a gym to attempt to keep fit but have you considered ensuring your doors might need a little TLC every now and again. If like the majority of the UK population you might only consider this when something significant happens such as the lock malfunctioning and you find yourself left out in the cold or, less appealing, your door or doors are vulnerable and have been compromised, and you find that an unwanted guest has entered your home!

Here at DG Servicing we are offering you the opportunity to ensure your doors are in as best condition as possible without the need for costly replacement and are as secure as possible for unwanted attention!

Points to look out for that may indicate your door needs a service!

- Catches when opened or closed
- Letting in a draught
- You can see daylight between the sash and the frame
- When locking the door you need to lift the door or give it a kick or nudge
- It just doesn't feel right!

For the one off cost of £75.00 + vat (£90.00)

We will visit your home to adjust and align your door sash so that the locking system is correctly aligned with the receivers/kept securely on the frame. Our service will include any combination of the techniques listed below:

- Depending on the construction of your door we can adjust the glazing position or "toe and heal" the door by removing the sealed unit and repacking it to help support the door sash.
- Most doors have some form of adjustable hinges. We may use these adjustment points to help re-align your door.
- We can re-fix your frame if it hasn't been correctly installed.

This is just one part of our preventative maintenance services that are designed to prolong the life of your doors and windows. If you are experiencing any of the symptoms listed above then a Door MOT Service could extend the working life of your door hardware avoiding costly replacement components.

If we find that some parts of your door have already failed or broken we will then quote you to replace the broken part which should then have a longer lifespan given that your door will be in its optimum operational position!
